

June 2026

Cretum

Growth, Value & Volatility Fund

The flexibility of investing globally

Fund Overview

Cretum Capital is an asset management firm specializing in a Macro-Multi-Strategy approach with a focus on North America. Our primary objective is to achieve superior risk-adjusted returns by integrating Macroeconomic analysis, fundamental company analysis, and assessing political and economic factors. Cretum Capital is committed to long-term outperformance while maintaining a focus on capital preservation under all circumstances. Our strategy involves deploying diverse market positions, including long/short positions in equities, indices, currencies, interest rate spreads, and dividend strategies. We aim to diversify risk through covariance analysis, seeking low correlations between asset classes, especially during periods of stress and heightened volatility.

General Information

Management Fee	2%	Start Date	July 1 st 2013
Success Fee	20%	Custodian Bank	Bank of New York

Market Commentary

June 2026 was a month with **unusual internal contradictions**: record highs early on, a meaningful pullback later, and a global map in which each region wrote its own story. On the other hand, the persistence of inflation, the emergence of a more hawkish Federal Reserve under new leadership, and a geopolitical picture that shifted from open confrontation to a fragile ceasefire between the United States and Iran.

In the U.S., equities pushed **new record highs** with technology and AI-related names still doing most of the work. The S&P 500 touched all-time highs above 7,600 points during the first two sessions of the month, while the Nasdaq Composite closed above 27,000 for the first time in history on June 1. The catalysts were familiar: Nvidia announced that its next-generation AI platform, Vera Rubin, was entering full production, and its endorsement of Marvell Technology, together with a reported \$2 billion direct investment, sent Marvell up more than 30% in a single session. That reinforced the narrative the market had been comfortable paying for since early spring: that AI-related demand **remained the primary driver** of equity returns, and that infrastructure spending would continue to broaden into industrials, materials and energy.

However, **the tone changed** as the month progressed. After hitting record highs, the S&P 500 **gave back** its gains and closed June with a monthly decline of **-1.03%**, ending its two-month winning streak. The Nasdaq also lost part of its early-month strength, with a particularly weak final week that included four consecutive days of losses in the tech-heavy index. The turning point was, in large part, the June 16–17 FOMC meeting, Kevin Warsh's first as Federal Reserve Chair. The Fed **held rates unchanged at 3.50%–3.75%** in a unanimous 12–0 vote, but the message underneath was **clearly hawkish**.

www.cretumpartners.com	Kevin Solórzano Silva ksolorzano@cretumpartners.com

The other defining event was the SpaceX IPO on June 12, **the largest public offering in history**. The company priced 555.6 million shares at \$135, raised approximately \$75 billion, and reached a valuation above **\$2 trillion** on its debut day after shares closed 19% higher at around \$161. Beyond the size of the deal itself, the market read the reception as a validation that investors **remain willing** to pay elevated multiples for a select group of technology names with strong AI-linked growth narratives. The IPO also opened the door for other high-profile listings expected to follow. Even so, it did not prevent the broader tech sector from correcting later in the month, as concerns around sticky inflation and the possibility of higher rates weighed on sentiment.

Europe followed a very different script. The STOXX 600 advanced approximately 1.6% during June and closed the second quarter with a gain of roughly 9%, its strongest quarterly performance since October 2020, supported by the retreat in oil prices back toward pre-war levels and by an improving Middle East backdrop. On June 11, the European Central Bank **raised its deposit rate** by 25 basis points to 2.25%, its first-rate hike since 2023, after headline eurozone inflation climbed to 3.2% in May (the highest print since September 2023), and core inflation moved up to 2.5%. The move was somewhat counterintuitive given the decline in crude, but the ECB was reacting to inflation that had already fed through the data rather than to the current oil price. ECB staff projections **trimmed eurozone growth** to around 0.8% for 2026, and markets priced roughly a 50% probability of a further hike in September.

In Mexico, the month was marked by a more constructive tone than in the previous quarters, although the domestic backdrop remained fragile. The S&P/BMV IPC traded in a relatively narrow range and closed June near 67,200 points, **roughly 2% lower** than at the end of May, underperforming most of its Latin American peers as investors continued to weigh weak growth against a still-attractive carry. The most relevant domestic event was Banco de México's monetary-policy decision on June 25: as widely expected, **Banxico held the overnight rate** at 6.50%, in line with the guidance provided at the May meeting when it signaled the end of its easing cycle.

In Asia, China delivered the more constructive **surprise of the month**. The Shanghai Composite closed June near 4,094 points and the CSI 300 traded above 5,000, its highest since December 2021, marking gains of roughly 10% for the second quarter and 22–29% year-over-year, depending on the index. The rally continued to be driven by liquidity, optimism around AI infrastructure, and selective strength in semiconductors and high-tech exporters, which helped offset the trade disruptions linked to the Middle East conflict. Macroeconomic data reinforced the tone: China's official manufacturing PMI unexpectedly **rebounded** into expansion territory at 50.3 in June (from 50.0 in May), the non-manufacturing PMI ticked up to 50.2, and the composite gauge reached a six-month high of 50.6. Exports, once again, appeared to be **the biggest engine of growth**, cushioning weak domestic demand and reinforcing expectations that Beijing may still need to deliver additional stimulus in the coming months.

Foreign exchange markets reflected the sum of these regional stories with unusual clarity. The U.S. Dollar Index (DXY) broke above 100 for the first time since May 2025, climbed to a 15-month high of 101.6 on June 24, and finished the month with a gain of roughly 2%, its strongest monthly performance since mid-2025. Against the euro, the dollar strengthened despite the ECB rate hike: EUR/USD **retreated** from levels close to 1.16 at the start of the month to around 1.14 by month-end, as the Fed's hawkish repricing outweighed the euro's own tightening story and softer-than-expected eurozone inflation prints. Against the Mexican peso, the picture was more nuanced. USD/MXN held close to 17.30–17.40 for much of June, supported by the peso's carry advantage and the softer domestic inflation reading, but the pair drifted up toward 17.50–17.60 in the final week as markets priced in a possible Fed hike and Banxico's clear signal that its cutting cycle is over. The peso ended slightly weaker over the month, though it remained one of the more resilient emerging-market currencies of 2026.

Overall, June 2026 was a month in which markets received a **necessary reality check**. The combination of a hawkish Fed, sticky inflation and elevated valuations reminded investors that the AI-driven rally **is not immune to macro conditions**. In this environment, and consistent with the **cautious stance** we outlined last month, we continue to believe that **discipline in allocation** and preservation of capital **will matter more** than chasing the tail end of the rally, particularly as the market digests the possibility that U.S. rates may stay higher (or even move higher) for longer than consensus had assumed only a few months ago.

Performance overview

At the end of June, we **outperformed the S&P 500 by 4.59%**, with our private equity positions serving as the largest contributor to returns. Some of these names underwent significant upward revaluations, adding **2.98%** to the fund's monthly performance. We remain confident that these positions still hold **strong long-term upside potential**, and we will continue to be patient while seeking additional compelling stories to incorporate into the fund.

As we have seen over the past several months, our **algorithmic models** continued to deliver **strong performance** and consistent alpha generation. We have capitalized on the favorable market momentum and robust demand across AI-related sectors by incorporating select names into our algorithmic models that have demonstrated exceptional performance. During June, our algorithmic models added **0.60%** to the fund's return.

Finally, we were able to collect a considerable amount of premiums by taking advantage of the volatility observed throughout the month; as a result, our options bucket added **0.59%**. This is particularly noteworthy because, as you can see, our options strategy represents one of the **smallest allocations** in terms of weight, yet ranks among the **largest contributors** in terms of performance. This reflects efficient use of capital, as well as our disciplined approach to risk control and execution.

Our challenges

Most of our European holdings experienced a pullback following a strong prior month (May), driven more by technical factors than by any material deterioration in the underlying fundamentals of the companies. Accordingly, we view this pullback as **entirely normal** and remain confident in the diversification, weighting, and long-term potential of each stock within this strategy. During June, our European holdings detracted **0.21%** from the fund's monthly performance.

A similar dynamic played out across our Asian and Mexican holdings, where certain names experienced pullbacks, again, nothing that raises concern. We have therefore decided to wait and assess whether we can re-enter these positions at more attractive price levels, which reflects our continued confidence in the current allocation. Asian holdings detracted **0.19%** from the fund's monthly performance, while Mexican holdings detracted **0.14%**.

Performance Disclaimers:

The information contained in this material is for illustration and discussion purposes only. It is not intended to be, nor should it be construed or used as, investment, tax, or legal advice, any recommendation or opinion regarding the suitability or appropriateness of any investment or strategy, or an offer to sell, or a solicitation of an offer to purchase, an interest in any security, including an interest in the private pool fund described herein (the "Fund") or any other fund or private pool advised by the Investment Manager or any of its affiliates. This information is fully qualified by the information contained in the Fund's offering documents, including the private placement memorandum or other prospectus (collectively, the "Offering Documents"). Any offer or solicitation of an investment in the Fund can only be made by delivery of the Fund's Offering Documents to qualified investors. Prospective investors should rely solely on the Offering Documents when making any investment decision. The Offering Documents contain important information, including, but not limited to, a description of the Fund's risks, investment program, fees, and expenses, and should be read carefully before making any investment decision. This material does not take into account the specific investment objectives, restrictions, or financial, legal, or tax situations of any particular investor. An investment in the Fund is not suitable for all investors. Past performance is not necessarily indicative of future results. This document is not intended for public use or distribution. Unless otherwise noted, the performance shown is audited, net of applicable management, performance, and other fees and expenses, assumes reinvestment of profits, and excludes specific investor sales and other charges. Please refer to the Fund's offering documents for more information on the Fund's fees, charges, and expenses, which will reduce the Fund's profits. Performance may vary significantly from year to year, or even month to month. Actual investor performance and fees may differ from the performance information shown due to, among other factors, capital contributions and withdrawals/redemptions, different share classes, and eligibility criteria for participation in "new issues." The value of investments may go up or down. Certain share classes of the fund may be closed, including the share class from which the performance shown has been derived. Past performance is not indicative of future results.

Benchmarks and financial indices are shown for illustrative purposes only and are provided to make general market data available as a single reference point. The information related to indices and benchmarks has been provided by and/or is based on third-party sources and, although believed to be reliable, has not been independently verified. Such benchmarks and financial indices may be available for direct investment, may be unmanaged, assume the reinvestment of income, do not reflect the impact of fees and trading costs, management or performance fees, and have limitations when used for comparison or other purposes because, among other reasons, they may have different trading strategies, volatility, credit, or other material characteristics (such as limitations in the number and types of securities or instruments). The Fund's objective is not limited to the securities and instruments that comprise any index. No representation is made that any benchmark or index is an appropriate measure of comparison.

Performance targets or objectives should not be taken as an indication of actual or projected future results. Actual volatility and returns will depend on a variety of factors, including general market conditions and the Investment Manager's ability to implement the Fund's investment process, objectives, and risk management. No representation is made that these targets or objectives will be achieved, in whole or in part, by the Fund.

Fund Risk Disclosures: Hedge funds are unregistered private investment pools that may invest and trade in various markets, strategies, and instruments (including securities, non-securities, and derivatives) and are not subject to the same regulatory requirements as mutual funds, including mutual fund requirements to provide certain periodic and standardized pricing and valuation information to investors. There are substantial risks in investing in hedge funds. You should carefully consider the following: Hedge funds represent speculative investments and involve a high degree of risk. An investor could lose all or a substantial part of their investment. Investors must have the financial ability, sophistication/experience, and willingness to bear the risks of an investment in a hedge fund. An investment in a hedge fund should be discretionary capital reserved strictly for speculative purposes. An investment in a hedge fund is not suitable or advisable for all investors. Only eligible qualified investors may invest in hedge funds. Hedge fund offering documents are not reviewed or approved by federal or state regulators. Hedge funds may be leveraged (including a high degree of leverage), and hedge fund performance can be volatile. An investment in a hedge fund may not be liquid, and there may be significant restrictions on the transfer of interests in a hedge fund. There is no secondary market for a hedge fund investment, nor is one expected to develop. A hedge fund may use a single advisor or employ a single strategy, which could result in a lack of diversification and higher risk. A hedge fund may involve complex tax structures, which should be read carefully, and may involve structures or strategies that may cause delays in important tax information being sent to investors. Hedge fund fees and expenses, which may be substantial, will offset the hedge fund's trading profits, regardless of any positive returns. Hedge funds are not required to provide periodic pricing or valuation information to investors. Hedge funds and their managers/advisors may be subject to various conflicts of interest. The foregoing summary is not a complete list of the risks and other important disclosures involved in investing in hedge funds and is subject to more complete disclosures contained in a hedge fund's confidential offering documents, which must be reviewed carefully. Directors and employees of Cretum Capital may make personal investments in certain hedge fund products for which Cretum Capital is compensated for introducing potential investors. Any personal investment by a director or employee of Cretum Capital in any hedge fund does not constitute a recommendation or endorsement of any specific product.
